

Hurricanes, Tropical Storms Becoming Less Frequent

Source: **Poetlimete Meteorologist Ryan Maue, Ph.D.**

Global Tropical Cyclone Frequency -- 12 month Running Sum -- Dr. Ryan N. Maue
 Updated December 31, 2017

Global warming
 Global warming is a long-term rise in the average temperature of the Earth's climate system, an aspect of climate change shown by temperature measurements and by multiple effects of the warming.

- CO2 and how you hear about The Grand solar Minimum, or Henrik Svensmark, the cold mystery. Cosmic ray, ??
- Henrik Eriksen/Alex Chapman, if the sun died tomorrow, how long do you think anything would live on Earth before all was ice?
- Alan Tomahly: There should be more information on how much land area has been covered in solar terms in comparison to how much more solar needed to accommodate the increased demand for energy in the world.
- Alan Tomahly: the presenter should have given more information on the actual costs in relation to german personal income
- Felix Zahnt: Not very long Henrik
- Douglas Pollock: Handled The Brave
- Alan Tomahly: So far there has been no correlation with sun spots and the 100000 year recurring ice ages. And even the ice ages are not regular 100000 year cycles; nobody knows what causes major climate changes.
- Ursula Bailey: I'm truly enjoying your live feed. Wonderful well needed information!!
- Howard Jones: Well done. Climate change has become a religion.
- Alan Tomahly: There was no applause for that presenter
- Joe and Diane East: excellent point: celebrate skepticism because that's science
- Robin Eschbly: Good talk! straight from the Philippines.
- Lisamaria Bailey
